

IN THE CLAIMS

Please amend the claims as follows:

Claim 1 (Canceled).

Claim 2 (Currently Amended): A content delivery method for a content delivery system for delivering content from a content delivery apparatus to a content processing apparatus by way of a network, the method comprising:

presenting a list of a plurality of sets of content including at least a set of content to be delivered by streaming and a set of content to be delivered by downloaded files at a content processing apparatus;

inputting specifying information specifying the set of content, from the sets of content on the list, to be delivered to the content processing apparatus from the content delivery apparatus; and

receiving, by the content processing apparatus from the content delivery apparatus, a startup file specifying streaming or downloaded file as a method of content delivery, said startup file corresponding to a license of the specified set of content; and

automatically acquiring by the content processing apparatus, without receiving ~~an~~ a user input selecting streaming or downloaded file as the method of content delivery, the set of content delivered from the content delivery apparatus according to ~~delivery information specifying the set of content as one to be delivered by streaming or one to be delivered by downloaded files, the delivery information being provided by the content delivery apparatus by way of the network~~ the startup file.

Claim 3 (Currently Amended): A content processing apparatus adapted to receive deliveries of content from a content delivery apparatus by way of a network, the apparatus comprising:

~~presentation~~ means for presenting a list of a plurality of sets of content including at least a set of content to be delivered by streaming and a set of content to be delivered by downloaded files;

~~input~~ means for inputting specifying information specifying the set of content to be delivered from the sets of content on the list; ~~and~~

means for receiving from the content delivery apparatus a startup file specifying streaming or downloaded file as a method of content delivery, said startup file corresponding to a license of the specified set of content; and

~~acquisition~~ means for automatically acquiring the set of content delivered from ~~a~~the content delivery apparatus by way of ~~a~~the network without selecting streaming or downloaded file as the method of content delivery according to ~~delivery information specifying each set of content as one to be delivered by streaming or one to be delivered by downloaded files, the delivery information being provided by the content delivery apparatus by way of the network~~ the startup file.

Claim 4 (Canceled).

Claim 5 (Currently Amended): The apparatus according to claim 3, wherein the ~~delivery information~~ startup file further includes information for accessing the sets of content.

Claim 6 (Currently Amended): A content processing method to be used for a content processing apparatus adapted to receive deliveries of content from a content delivery

apparatus by way of a network, the method comprising:

~~a presentation step of~~ presenting a list of a plurality of sets of content including at least a set of content to be delivered by streaming and a set of content to be delivered by downloaded files;

~~an input step of~~ inputting specifying information specifying the set of content to be delivered from the sets of content on the list; ~~and~~

receiving from the content delivery apparatus a startup file specifying streaming or downloaded file as a method of content delivery, said startup file corresponding to a license of a set of content; and

~~an acquisition step of~~ automatically acquiring the set of content delivered from a the content delivery apparatus by way of a the network without selecting streaming or downloaded file as the method of content delivery according to ~~delivery information specifying each set of content as one to be delivered by streaming or one to be delivered by downloaded files, the delivery information being provided by the content delivery apparatus by way of the network~~ the startup file.

Claim 7 (Currently Amended): A ~~program recorded on a~~ computer-readable recording medium so as to ~~be installed in a content processing apparatus for receiving content delivered from a content delivery apparatus by way of a network, the program~~ including computer executable instructions, which when executed by the content processing apparatus, cause the content processing apparatus to perform a method comprising:

~~a presentation step of~~ presenting a list of a plurality of sets of content including at least a set of content to be delivered by streaming and a set of content to be delivered by downloaded files;

~~an input step of~~ inputting specifying information specifying the set of content to be

delivered from the sets of content on the list; ~~and~~

receiving from the content delivery apparatus a startup file specifying streaming or downloaded file as a method of content delivery, said startup file corresponding to a license of a set of content; and

~~an acquisition step of~~ automatically acquiring the set of content delivered from ~~a the~~ content delivery apparatus by way of ~~a the~~ network without receiving ~~an a~~ user input selecting streaming or downloaded file as the method of content delivery according to ~~delivery information specifying each set of content as one to be delivered by streaming or one to be delivered by downloaded files, the delivery information being provided by the content delivery apparatus by way of the network~~ the startup file.

Claim 8 (Canceled).

Claim 9 (Currently Amended): A content processing apparatus adapted to receive deliveries of content from a content delivery apparatus by way of a network, the apparatus comprising:

a display configured to present a list of a plurality of sets of content including at least a set of content to be delivered by streaming and a set of content to be delivered by downloaded files;

an interface configured to accept input specifying information specifying the set of content to be delivered from the sets of content on the list; ~~and~~

a receiver configured to receive from the content delivery apparatus a startup file specifying streaming or downloaded file as a method of content delivery, said startup file corresponding to a license of the specified set of content; and

an acquisition unit configured to automatically acquire the set of content delivered

from a ~~the~~ content delivery apparatus by way of a ~~the~~ network without selecting streaming or downloaded file as the method of content delivery according to ~~delivery information specifying each set of content as one to be delivered by streaming or one to be delivered by downloaded files, the delivery information provided by the content delivery apparatus by way of the network~~ the startup file.

Claim 10 (Canceled).

Claim 11 (Currently Amended): The apparatus according to claim 9, wherein the ~~delivery information~~ startup file further includes information for accessing the sets of content.
